

Critical Thinking: A Five-Step Decision-Making Process

Summary

The lecture introduces critical thinking as a systematic way to evaluate choices and avoid bias. It outlines a five-step process—formulate the question, gather information, apply the information, consider implications, and explore other points of view. Each step is illustrated with real-world examples such as diet fads, dubious email offers, and political decisions. The instructor stresses that mastering this process improves personal decisions and can lead to a more reasonable society.
